

# Enyo Renewable Energy

Enyo is a Utah based company, specializing in developing utility-scale renewable energy projects in the Intermountain West. We believe solar energy and storage development positively benefits our region and community by creating new tax revenues, local jobs, money for schools, updated county facilities and increased opportunities for landowners as well as supports an “all of the above” energy strategy that will make the grid more reliable and efficient.

Enyo’s employees share several common threads — the conscious choice to work in the field of renewable energy and the desire to be responsible neighbors and corporate citizens.

Our team is currently operating, constructing, or negotiating Power Purchase Agreements for 1092 Megawatts. Enyo is in partnership with Eolian which has invested more than \$2 billion in development of electricity generation in the United States, retaining an interest in 18,000 megawatts of operating projects.
