

# Dinosolar Decommissioning & Reclamation

The Dinosolar Project is subject to rules guiding the decommissioning and removal of the solar and storage facility, as well as the restoration and reclamation of the land affected by the facility. Our leases with private landowners contain language addressing the removal of the facility and the restoration of the surface of the property to its approximate original condition that existed before the lease. Removal and restoration shall begin within 90 days upon expiration or earlier termination of the lease. Per the terms of the Ground Lease Agreements between Dinosolar, LLC and private landowners, Dinosolar LLC will provide the landowner with financial security to ensure removal is completed.

Dinosolar LLC will ensure the removal and proper disposal of all photovoltaic panels, cabling, electrical components, substation, and any other associated or ancillary equipment or structures within the facility boundary. To reduce the quantity of waste that could be placed in the landfill, Dinosolar LLC, will identify recycling options for the photovoltaic panels, steel and metal infrastructure, and if possible, electrical cables and other project materials.
